

[FOREWORD](#)

[INTRODUCTION](#)

2,3,4-TRICHLORO-1-BUTENE
CAS N°: 2431-50-7

Substance

<i>End Point</i>	:	IDENTIFIERS, PHYSICAL AND CHEMICAL PROPERTIES
<i>Chemical Name</i>	:	1-Butene, 2,3,4-trichloro-
<i>Common Name</i>	:	2,3,4-Trichloro-1-butene
<i>CAS Number</i>	:	2431-50-7
<i>RTECS Number</i>	:	EM9046000

Synonyms

TCB**1,2,3-Trichlorobutene-3**

Properties & Definitions

<i>Molecular Formula</i>	:	C4H5Cl3
<i>Molecular Weight</i>	:	159.44
<i>Melting Point</i>	:	-52C
<i>Boiling Point</i>	:	155C-162C
<i>State</i>	:	Gas predominantly
<i>Flash Point</i>	:	63C, liquid*
<i>Density</i>	:	1.34g/cm3 at 20C
<i>Vapour Pressure</i>	:	0.23kPa(177mmHg) at 20C
<i>Octanol/Water Partition Coefficient</i>	:	log Pow = 2.4 calculated
<i>Water Solubility</i>	:	600mg/l at 20C
<i>General Comments</i>	:	*The given FP determined by the method DIN 51578.

Overall Evaluation

SIDS INITIAL ASSESSMENT

This chemical warrants special attention on the basis of its carcinogenic potential. Exposure has to be avoided by all means. The compound should be produced and processed in closed systems only.

SHORT SUMMARY OF THE REASONS SUPPORTING THE RECOMMENDATIONS

Trichlorobutene has a high acute inhalation toxicity. At repeated dose toxicity, neuro-epithelioma and maligne were found. No further work recommended.

GENERAL DISCUSSION

The production level of TCB in Germany was about 1000-2000 tons in 1989. TCB is not exported. There is no information about imported volumes. Data on production volumes in other countries are not available.

The compound is produced and used in closed systems only. It is only used as an intermediate for the synthesis of chloroprene. There is no public use.

ENVIRONMENTAL EXPOSURE

Solid and gaseous wastes are treated by incineration and liquid wastes are directed to a waste water treatment plant.

There is no information about environmental monitoring data available.

Based on the physicochemical properties of the compound, there is a tendency to pass from water to air and a low tendency to pass from water to sediment.

Bioaccumulation may be expected to a small extent.

TCB is not readily biodegradable.

Hydrolytical degradation or direct photodegradation in water are not to be expected.

The half-life due to photochemical-oxidative degradation in the atmosphere is about 1.4 days (calculation

according to Atkinson).

CONSUMER EXPOSURE

The described use pattern for Germany excludes any consumer exposure. There are no information available about a possible public use of TCB in other countries. The compound is produced and used in closed systems only.

Based on analytical monitoring performed by the German producer, exposure concentration at the workplace (production and processing) is as follows:

production : 0.01-0.03mg/m³

processing: below the detection limit of 0.007mg/m³

TOXICITY

HUMAN TOXICITY

a) Acute toxicity

The acute oral toxicity of trichlorobutene is moderate (rat: LD₅₀ 351mg/kg body weight). After inhalation, high toxicity must provisionally be assumed, since it is not currently possible to weigh the different LC₅₀ values (430 up to 1722mg/m³/4h) as study details are missing.

b) Repeated dose toxicity

Because of the strong irritant action on the mucosa after repeated inhalation (rat: 102mg/m³, 4h/d, 10 days) there are morphologically detectable changes in the airways and the lungs. After long term inhalation exposure (rats: 2ppm, 6h/d, 5d/week, for 12 weeks followed by 88 weeks at 1.5ppm), in the nasal cavities, neuro-epithelioma and maligne neurinoma were found.

In another study a NOAEL of 0.1ppm was derived.

c) Genetic toxicity

The result of the single available in vivo study (rats: dominant lethal test) shows no mutagenic potential. However, with bacteria or yeast, trichlorobutene induced an elevated gene mutation rate.

d) Other toxicological endpoints

Local action on the skin and the eye may lead to erosions.

AQUATIC ORGANISMS

The available test results could not be validated.

At the OECD review meeting it was considered that no further testing was needed because of lack of exposure in the environment.

Exposure

Exposure Type : **SHORT**
Exposure Period : **4 wk**
Frequency : **5 d/wk**
6 h/d
Dose / Concentration : **0.55-15.5 ppm**
Exposure comments : Concentrations of 0, 0.55, 2.0, 8.1 and 15.5ppm were used for male and female rats. It was followed by 2 weeks observation: biochemistry, haematology and clinical pathology were assessed.

Test Results

<u>Organ</u>	<u>Effect</u>	<u>Rev.</u>	<u>OnSet</u>	<u>Sex</u>	<u>Affected in Exposed - Controls</u>
	NOAEL				

No Observed Adverse Effect Level was established to be 0.55ppm.

DEATH

Mortality was increased at 8.1 ppm and was 100% at dose level of 15.5ppm.

LUNG SIZE

Increased relative weight of lungs was observed at dose levels of 2.0 and 8.1ppm.

**LUNG STRUC
NOSE**

Hyperplasia and degenerative metaplasia of the epithelium of lung, nose and bronchi at the doses of 2.0 and 8.1ppm.
